

## **IMMEDIATE CARE OF OKLAHOMA** **INFECTION CONTROL & PREVENTION**

**Immediate Care encourages masks to help stop the spread of large droplet infections and to promote social distancing.**

We continue to encourage mask wearing inside of medical facilities. We are seeing an increase in Influenza, RSV, and COVID this sick season.

Let our front desk staff know if you would rather wait in your car and we will text you when it is time to be seen.

We are continuing our infectious disease protocols to minimize spread of infections inside of our facilities. We continue to wipe down the rooms in between patients and deep cleaning upon highly contagious cases. We have HEPA filters that purify and clean the air in the room multiple times during a normal visit of the patient and in between patients. Our filters also contain ultraviolet treatment of the air. We continue to leave shielding in place and wear masks to protect ourselves and others when appropriate.
